INTRODUCTION:

- Enterprises usually make a choice between formal and informal cost accounting.
- Informal cost accounting system keeps cost records on the basis of memorandum statements and face limitations.
- So, Formal system of accounting is used In most of the concerns.
- There are following two ways for maintaining cost books under formal cost accounting:
- I. Cost and financial accounts kept separately and called nonintegrated system of cost accounting.
- 2. Cost and financial accounts are kept mingled and called integrated system of cost accounting.

Non-integraL SYSTEM:

- Non-integral system is a system of accounting under which two separate sets of account books are maintained—one for cost accounts and the other for financial accounts.
- Since separate ledgers are maintained for cost and financial accounts in this system, the cost accountant is responsible for recording of the cost accounting transactions and the financial accountant is responsible for financial transactions.
- Non-integral system of accounting is also known as non-integrated system or Inter-locking system or Cost Ledger Accounting system.
- CIMA, London defines Non-integral system as a system in which the cost accounts are distinct from financial accounts, the two sets of accounts being kept continuously in agreement by the use of control accounts or made readily reconcilable by other means.

KEY FEATURES OF NON-INTEGRAL :

- (i) Separate ledgers are maintained for cost and financial accounts.
- (ii) Like financial accounting, it is also based on double entry system.
- (iii) There are no personal accounts because cost accounts do not show relationship with outsiders.
- (iv) Cost accounts are concerned with impersonal accounts i.e., real and nominal accounts.
- (v) In real accounts, only stocks are shown in cost accounts.

FEATURES CONTINUED...

- (vi) Transactions affecting the nominal accounts are recorded separately in detail. Thus cost accounting department is concerned mainly with the ascertainment of income and expenditure of business,
- (vii) Under this system one main ledger (i.e., Cost Ledger) and various subsidiary ledgers are maintained,
- (viii) Since the system is not properly integrated, some items may appear in financial ledgers only, while some other items appear only in cost ledger,
- (ix) The profit or loss disclosed by the two sets of accounts for a particular period will never be the same and as such a reconciliation of costing profit or loss with that of financial accounts is essential.

LEDGERS UNDER NON INTEGRAL:

Basically two types of ledgers are maintained under NON-INTEGRAL system:

- (a) The principal financial ledgers
- (b) The principal cost ledgers.

The Principal Financial ledgers are:

- (i) General Ledger:
- It contains all real, nominal and personal accounts except trade debtors and trade creditors account.
- (ii) Debtors Ledger:
- It has personal accounts of trade debtors.
- (iii) Creditors Ledger:
- It has personal accounts of trade creditors.

LEDGERS UNDER NON-INTEGRAL CONTINUED...

The principal cost ledgers are:

- (i) Cost Ledger:
- It is the principal ledger in cost books which controls all other ledgers in the costing department. It contains all impersonal accounts and is similar to General Ledger of financial accounts.
- (ii) Stores Ledger:
- It is a subsidiary ledger. It contains all stores accounts.
- (iii) Work-in-Progress Ledger:
- It is a subsidiary ledger. It contains a separate account for each job in progress. Each such account is debited with the materials costs, wages and overheads chargeable to the jobs and credited with the cost of work completed. The balance in this account shows the cost of uncertified work.
- (iv) Finished Goods Ledger:
- It is a subsidiary ledger. It contains accounts of completely finished goods and jobs. The cost ledger is made self-balancing by opening a control account for each of the above subsidiary ledgers.

INTEGRAL SYSTEM:

- Integral or Integrated system is a system of accounting under which only one set of account books is maintained to record both the Cost and Financial transactions.
- The system implies the merger of both cost and financial accounts in one set of books.
- The two sets of account books merge into a composite system.
- CIMA, London defines Integral system as a system in which the financial and cost accounts are interlocked to ensure that all relevant expenditure is absorbed into the cost accounts.

KEY FEATURES OF INTEGRAL:

- (a) There is no need for cost ledger because all control accounts are maintained in the financial ledger.
- (b) There is no need to open a Cost Ledger Control Account because both the aspects (i.e., debit and credit) of all transactions are recorded in respective accounts.
- (c) Subsidiary ledgers i.e., Stores Ledger, Work-in-Progress Ledger and Finished goods ledger are maintained as is done in non-integrated accounting.
- (d) A Sales Ledger (containing personal accounts for each customer) and a Purchase Ledger (containing personal accounts for each supplier) are also maintained.
- (e) Overhead ledger is maintained to contain separate accounts for factory, administration and selling and distribution overhead.
- (f) A control account for each subsidiary ledger is maintained in the general ledger.

KEY FEATURES CONTINUED...

- (g) The balances of overheads Control Accounts represent under or over absorption of overheads which are transferred to Profit and Loss Account.
- (h) The profit or loss as per Profit and Loss Account is transferred to Profit and Loss Appropriation Account.
- (i) The degree of integration must be determined in advance. Some business firms may integrate the cost and financial accounts up to the stage of prime cost or factory cost while other firms integrate the two completely.
- (j) A suitable coding system is generally developed to serve the purposes of both cost accounts as well as financial accounts.
- (k) There should be an agreed accounting procedure in respect of treatment of provision for accruals, prepaid expenses and other adjustments necessary for preparing interim accounts.

LEDGERS UNDER INTEGRAL:

- (i) Stores Ledger Control Account;
- (ii) Work-in-Progress Ledger Control Account;
- (iii) Finished Goods Ledger Control Account;
- (iv) Wages Control Account;
- (v) Factory Overhead Control Account;
- (vi) Administrative Overhead Control Account;
- (vii) Selling and Distribution Overhead Control Account;
- (viii) Sales Ledger Control Account;
- (ix) Purchase Ledger Control Account.

DIFFERENCE BETWEEN INTEGRAL AND NON-INTEGRAL:

NON-INTEGRAL

- Two separate sets of account books are maintained—one to record cost transactions and the other to record financial transactions.
- Cost Ledger is maintained.
- Control Accounts are opened in the Cost Ledger.
- There are two figures of profit or loss—one as per cost accounts and another as per financial accounts.

INTEGRAL

- Only one set of account books is maintained to record both the cost transactions and financial transactions.
- Cost Ledger is not maintained.
- Control Accounts are opened in the General Ledger.
- There is only one figure of profit or loss because only one set of account books is maintained.

DIFFERENCE BETWEEN INTEGRAL AND NON-INTEGRAL CONTINUED...

NON-INTEGRAL

- There is need for reconciliation of cost accounts and financial accounts because there are two figures of profit or loss as there are two sets of account books.
- Balances of Overheads Control Accounts which represent under or over absorption of overheads are transferred to costing Profit & Loss Account.
- There is duplication of recording the transactions in two sets of account books. It requires more manpower, time and money.

INTEGRAL

- There is no need for reconciliation because there will be only one figure of profit or loss as there is only one set of account books.
- Balances of Overhead Control Accounts which represent under- or overabsorption of overheads are transferred to Profit and Loss Account.
- It is economical because it avoids the duplication of recording the transactions in two sets of account books.

THANK YOU
